SUMMARY

I am a Software Engineer with 2 years of experience building **distributed backend services**, event-driven systems, **cross-platform applications**, and **full-stack websites** with **Go**, **Python**, **TypeScript**, and **React**.

EDUCATION

University Of California San Diego

June 2021 - June 2025

Major: Math-Computer Science Minor: Finance

WORK HISTORY

Junior Systems Developer

August 2025 - Present

LiNK

- Implemented JWT-based **authentication** for a **distributed system** built in **Go** to secure **REST APIs** and service-to-service communication across multiple **user-facing applications** and containerized backend services.
- Refactored **Go** logging to use structured **slog** with debug, info, warning, and error levels, and implemented request-ID propagation across **HTTP** and **NATS** workflows to simplify **debugging** across the **entire backend system**.
- Developed and deployed the company's website from **figma** mockups to production by implementing a responsive **HTML**, **CSS**, and **JavaScript** frontend and a **Go** backend with **form-processing APIs**, **server-side validation**, and **IP-based rate limiting** to deliver a secure, production-ready customer-facing platform.
- Implemented a Digital Care Board using **React** and **TypeScript** with reusable components, state-driven rendering, and dynamic date/time logic to provide patients with accurate, up-to-date healthcare information.
- Built a **real-time** video communication interface with **React** and **TypeScript** that includes incoming-call notifications, **dynamic participant layouts**, call controls, and call duration timer for a responsive multi-user communication workflow.
- Engineered and deployed an **end-to-end Python** BACnet integration using **BAC0**, and **NATS**, implementing batched device reads, **state-change detection**, and value aggregation to publish **real-time** control updates and immediately notify users when temperature, lighting, or other in-room devices change state.

Software Engineer - Full Stack

March 2025 - September 2025

MyMicrojourney

- Engineered backend **REST API** endpoints using **NestJS** and **MongoDB**, implementing secure route prefixes and **CORS** configuration to reliably **receive**, **validate**, and persist user data for frontend application workflows.

Full Stack Developer Intern

July 2024 - October 2024

Bad Kids Korporation

- Led a cross-functional team to **design**, **develop**, **test**, and **debug responsive web applications** using **HTML**, **CSS**, and **JavaScript**, improving usability and delivering polished frontend experiences across devices.

PROJECTS

Full-Stack Monitor Brightness Controller

- Built a **React Native** and **TypeScript** mobile app that sends authenticated brightness requests to a **Python HTTP API**, enabling users to control their Mac-connected monitors from their phones.
- Developed the app's **Python backend** to **validate requests**, update JSON state, and apply brightness changes through DDC/CI, with change-detection polling and macOS LaunchAgents supporting scheduled automation.

Developer Journal Website

- Designed and implemented a responsive homepage using **HTML**, **CSS**, and **JavaScript**, building adaptive layouts and intuitive navigation to deliver a polished, user-friendly experience across desktop and mobile screen sizes.

SKILLS

Languages: Python, Go, TypeScript, HTML, CSS, JavaScript, C++, SQL, Assembly, C, Java

Tools & Technologies: Git, React, React Native, MongoDB, AWS, Docker, Podman, Expo Router

Expertise: Full Stack Web Development, Distributed Systems, LiveKit Integration, WebSocket, REST APIs, Microservices, NATS, Gesture-Based UI, Spatial Navigation, Git-Based Workflow, Agile Development, Event-Driven Architecture

Soft Skills: Ownership, Critical Thinking, Continuous Learning, Cross-functional Collaboration, Team Leadership, Result Driven
