Experience

Systems Developer August 2025 – Present
LiNK *Irvine, CA*

- Secured REST endpoints across 2 Go backend services by implementing reusable JWT authentication middleware with RS256 signature verification and token-expiration validation, requiring clients to authenticate with a client ID and secret to obtain access tokens.
- Improved log filtering and request tracing across 5 Go backend services by replacing unstructured logs with leveled JSON logging using Go's slog and propagating request IDs across HTTP and NATS workflows.
- Delivered an 11-page company website from Figma designs to production by independently implementing page layouts, responsive styling, and interactive features using HTML, CSS, and JavaScript.
- Integrated contact and demo-request workflows with Go REST APIs using asynchronous JavaScript form submissions and success/error handling, enabling users to contact the company and request demonstrations.
- Protected both website submission endpoints from excessive requests by implementing a concurrency-safe Go token-bucket rate limiter with per-IP refill rates of one request every 30 seconds and bursts of up to three requests.
- Refactored 5 patient-facing React Native screens to use react-tv-space-navigation, replacing standard React components with spatial-navigation components to support directional focus management and seamless navigation using Apple TV remotes and keyboards.
- Engineered an asynchronous Python script that polls BACnet devices, detects state changes, and publishes room-specific updates across 140 rooms through NATS, enabling users to view device state changes in real time.

Software Engineer - Full Stack March 2025 – September 2025
MyMicrojourney *San Diego, CA*

- Engineered secure REST endpoints using Typescript and MongoDB to reliably process and persist frontend user data, strengthening application security and data integrity through protected route prefixes, and request validation

Full Stack Developer Intern July 2024 – October 2024
Bad Kids Korporation *San Francisco, CA*

- Led a cross-functional team to build and refine responsive web applications, improving cross-device usability and interface quality through frontend development, testing, and debugging using HTML, CSS, and JavaScript.

Projects

Monitor Brightness Controller | *React Native, TypeScript, Python*

- Enabled mobile control of external monitor brightness across 101 levels (0–100) by building a React Native/TypeScript app with input validation and authenticated API requests.
- Automated external monitor brightness with two daily schedule transitions and one-second polling by developing a Python REST API and macOS background service integrating DDC/CI commands

Everything Fitness | *React, TypeScript, Go*

- Enabled exercise discovery across 19 muscle groups and 2 workout locations by building a responsive React and TypeScript interface with API-driven results, animated previews, and step-by-step instructions.
- Enabled targeted retrieval of 1,422 exercises across 19 muscle groups by developing a Go REST API with JSON responses, muscle-based filtering, and equipment-based home/gym classification.

Education

University of California San Diego San Diego, CA
Bachelor of Science in Math-Computer Science, Minor in Finance *June 2021 – June 2025*

Technical Skills

Languages: Python, Go, TypeScript, HTML, CSS, JavaScript, C++, SQL, Assembly, C, Java
Tools & Technologies: Git, React, React Native, MongoDB, AWS, Docker, Podman, Expo Router
Expertise: Full Stack Web Development, Distributed Systems, LiveKit, WebSocket, REST APIs, Microservices, NATS, Gesture-Based UI, Spatial Navigation, Git-Based Workflow, Agile Development, Event-Driven Architecture
AI-Assisted Development: Codex, Claude; plan-first implementation workflows, code review, and verification of AI-generated suggestions through testing
Soft Skills: Ownership, Critical Thinking, Cross-functional Collaboration, Team Leadership, Result Driven
